Paginator

Header

Infinite Scroller (Up/down)

Infinite Scrolling
- Scrolling UP/Down -> Switch Page
- API call prevent (if data already exit, api will not call called).

Pagination
- API calling prevention (if data already exist, api will call called).

On click specific page, data will loaded (API calling prevention) and adjust Scroller.
- Prev -> Disabled if we are at the 1st, on click switch page
- Next -> if all data loaded, disabled, on click switch page.

Expectation Criteria
- Use OOPs
- API implementation with class, shared APIService, extend, ProductDetails extends APIService { ... }
- Pagination Class (all responsibility of the pagination)
- DRY, Code clean
- GET Request (dummy API)
- HTML/CSS/JS
- Responsive
